Power Query Assignment-6B

Dataset Link: Sales_dataset

The dataset contains sales transaction records for different products, customers, and territories. Your goal is to load it into Power BI and create advanced DAX measures to answer the following questions.

- Load the data into **Power BI** and perform the following operations.
- "**Use the first row as headers**" in case fields of the dataset are in the first row during Power Query transformation.
- Each exercise will have a **task description** and a **hint** to guide you in completing the transformation.
- Read the dataset and field descriptions carefully before starting.

Tasks

Q1.Calculate the Rolling 90-Day Sales Average

- **Hint**: Use a date-based calculation with `DATESINPERIOD` to compute average sales for the last 90 days dynamically.

Q2. Find Top 5 Products by Profit (Dynamic)

- **Hint:** Use `RANKX` over products and filter to only the top 5 for profit.

Q3. Calculate Customer Retention Rate

- **Hint:** Compare customers who placed orders in the current year vs. the previous year using `INTERSECT` or related logic.

Q4. Calculate Profit Margin % by Territory (Last 6 Months)

- **Hint:** Filter data for the last 6 months and calculate `(SUM(Profit) / SUM(Sales)) * 100`.

Q5. Identify High-Value Orders

- **Hint:** Calculate the 95th percentile of sales using `PERCENTILEX.INC` and count orders above this value.

.

Q6. Dynamic Product Rank within Category by Sales

- **Hint:** Use `RANKX` with category as a grouping filter.

Q7. Month-over-Month (MoM) Sales Growth %

Hint: Use `DATEADD` or `PARALLELPERIOD` to compare sales for the current month with the previous month.

Q8. Customer Segmentation by Total Purchase

- **Hint:** Use `PERCENTILEX.INC` to split customers into Platinum (top 20%), Gold (next 30%), Silver (remaining 50%).

Q9. Cumulative Profit Until Selected Date

- **Hint:** Use `FILTER` with `ALLSELECTED` to accumulate profit up to the selected slicer date.

Q10. Average Discount for High-Sales Products

- **Hint:** Identify products in the top 10% of sales, then calculate the average discount for them.
